Occupational Injuries by Accident Type and Occupation in British Columbia, 1997, 1998 and 1999

This report provides statistical information on occupational injuries in British Columbia for the years 1997, 1998 and 1999. The injuries are categorized by the type of accident that led to the injury and by the occupation of the injured person. The injuries included in the report are those that occurred in 1997, 1998 or 1999, and were accepted for short term disability benefits, long term disability benefits, or survivor benefits either in the year of injury or in the following year. The injuries included for year of injury 1999 are those accepted in 1999 or in the first nine months of 2000. This means that the counts for 1999 are on the same basis as the counts for the other years for all practical purposes.

'Short term disability' is the new term for what was formerly called 'wage loss', and 'long term disability' is the new term for what was formerly called 'permanent disability'. Claims uncoded to accident type or occupation have been proportionately allocated to the accident type and occupation categories.

Claims can be counted in different ways, so some care is needed in comparing the claim counts in this report to claim counts in other wcb reports. For example, in the statistical supplement to the 1999 Annual Report, Statistics '99, claims are counted by the year in which the first benefit was awarded, rather than by year of injury.

The coding on which this report is based is done by the Statistical Services Department of the Workers' Compensation Board. The code standards used for type of accident and for occupation are part of the CWIS coding standard used by all the compensation boards in Canada. The code standard for the type of accident is CSAZ795 and the code standard for occupation is the 1991 SOC (Standard Occupational Classification)

There are nine tables in the report. The first eight tables show information summarized at varying levels of occupation detail and type of accident detail. The information provided includes claim counts by gender and statistics on average age, injury year duration, and rate of injury.

The ninth table provides counts of claims at the most detailed levels of occupation and type of accident. Data is shown for the 75 occupations with the highest claim totals in the 1997/1998 period. Comparable information for other occupations is available on request from the Statistical Services department of the Workers' Compensation Board:

Mailing address	PO Box 5350, Vancouver BC V6V 5L5
Phone	604 276 3130
Fax	604 276 3290.

The injury rate calculation in Table 1 is approximate. The estimates of personyears are calculated by combining information on total employment by occupation from the Statistics Canada Labour Force Survey with estimates of wcb covered personyears of employment.
